

"WE'RE NOT GONNA TAKE IT!"

The **Vaccine Resistance Movement** in Canada will hold a **Nationwide Informational Demonstration and Political Protest, Friday August 28th, 29th and 30th, 2009**. We want to ensure that our right as free human beings, to decide for ourselves whether or not to be vaccinated will not be violated, under ANY circumstances, and without fear of any consequences. Everyone who shares our concerns about H1N1 vaccine dangers, as well as the threat to natural health solutions under Bill C-6, needs to get involved, inform others, and to help protest the mass vaccination agenda (which may become mandatory).

On June 11th, the World Health Organization declared a Pandemic Level 6, and as such, can recommend that vaccinations be given to all citizens, of all signatory nations of the International Health Regulations (IHR), overriding constitutional rights and freedoms. As such, we want to begin now to give the W.H.O., BIG PHARMA, the federal and the provincial governments, and their health departments, a loud and clear message:

"WE ARE NOT GOING TO TAKE IT!" (unless we decide to do so by virtue of our own free, informed choice). We feel it is essential to state this before children return to school, and/or any national or local emergency is declared, and mass vaccination programs begin.

INFORMATIONAL EVENT & PROTEST:

Friday, August 28th, 2009
4:00 pm to 6:00 pm
Vancouver Art Gallery,
Robson Square

The speakers include: Dr. G. Goddard, Dr. H. Dunn, Kevin Annett, Candice Hill, Croft Woodruff, Sean Buckley. This will be followed by a march in the downtown area, that will take us to the CBC building to demand objective, honest reporting on H1N1 and vaccines. A second event hosted by Kevin Annett will take place at 7 pm at the V.P.L.

Similar demonstrations are being planned for Calgary, Toronto, Ottawa and Montreal.

We hope to have people all across Canada follow up with their own street actions in their own towns on August 29th and 30th to help inform fellow citizens about vaccine dangers. We encourage peaceful, responsible, civil action only. **PLEASE JOIN US!**

1. **H1N1 is being called a "pandemic"**, however experts only agree that they have NO IDEA how bad or how lethal the H1N1 virus will become, or if it will become lethal at all. They are merely speculating. Symptoms have been relatively mild with few fatalities, and of those, most had previously existing conditions and compromised immune systems. Even if it does recombine and become more lethal in future waves, what is more likely to help you? Strengthening your natural immune system, or injecting toxins into your body?

2. **What's in the vaccine?** Like virtually all vaccines, the H1N1 flu vaccine will likely contain the following ingredients: **Thimerosal (Mercury), Polysorbate 80, Triton X100 (detergent), Aluminum Gels, Formaldehyde, Anti-biotics, MSG, Sulfites, Egg Protein, Tissue from aborted human (or animal) fetuses, live or dead viruses, and Adjuvants, including Squalene which can all lead to serious side effects**, as they break down the human immune system. For this very reason, Squalene has been used in biological weapons. There are too many chemical ingredients and side-effects to mention here. But is it any wonder that the most health care workers do not take them, and that they oppose any notion of "mandatory vaccinations"? So why are you being encouraged to take them? Who does it really benefit?

3. **Why are the vaccines being promoted?** Why all the fear? There is BIG money involved. Stocks in Pharmaceuticals have soared since the outbreak began. Curiously, one of largest manufacturers, **Baxter, actually patented the Swine Flu vaccine in 2008**. How did they know this would be necessary and profitable? Good question! A number of scientists have stated that this combination of human-swine and avian flu strains could not occur in nature; that the H1N1 virus may be a bio-weapon that may have been either accidentally or intentionally released from a lab.

4. **Some history:** The so-called **Spanish Flu pandemic of 1918**, which killed 40 to 50 Million people did NOT start in Spain, but rather, at **Fort Dix** in the USA. The spread seemed to follow a world wide vaccination against smallpox. What killed the victims was called a "Cytokine Storm". (Google it!) Did you know that in the past decade, scientists actually dug up cadavers of 1918 flu victims that were buried in the frozen north to obtain virus samples, allegedly to develop vaccines against potential new outbreaks?

5. **Some more history:** In **1976**, following a limited outbreak of **Swine Flu in the USA, that also began at Fort Dix**, a huge propaganda campaign was launched to vaccinate the entire public against a predicted "pandemic" that would kill millions of Americans. Only one death was later officially attributed to the flu. 25 died from the vaccine, while some 5000 people developed severe neurological disorders before the program was halted. Many people warned against the hysteria and risks, but sadly, it fell on deaf ears.

6. **We have choices, right?** For now, you do have a choice about the shots, BUT that may not be the case in a few months time. The **International Health Regulations (IHR)** are published by the **World Health Organization (WHO)**. The USA and Canada are signatories to the IHR and recommendations made by the WHO, including mass vaccination programs, are binding upon all signatory nations, and could potentially be used to override national sovereignty and constitutional rights and freedoms. Shouldn't everyone have the right to refuse toxins being injected into them?

7. **Alternatives Remedies?** Protect yourself by strengthening your natural immune system NOW! Avoid junk food, especially sugary food or drinks. Avoid aspartame, alcohol and other drugs. Drink lots of fresh water and eat fresh fruit, nuts and vegetables. Consult your local health food store and homeopaths regarding supplements. Avoid air travel (due to recirculated air). Go for regular walks (not extreme, depleting work outs) and get plenty of sleep. Wash your hands often with hot water and soap often. Take Vitamin C, D, Garlic, Oregon, and Colloidal Silver products. If you begin to feel ill, self-quarantine. Avoid store bought remedies that reduce fever. A fever is what will kill the virus, if you allow it to! Tamiflu has been proven to be ineffective against H1N1 and dangerous for children and teens.

8. **Why are we telling you this?** Because we are concerned citizens and neighbours - NOT fear mongers. We will, however, be counting on you to take good care of yourself and help limit the flu outbreak, which will be good for everyone. We want to preserve YOUR RIGHT to choose, and want you to support OUR RIGHT to NOT be forcibly vaccinated, should the government decide to make these toxic shots mandatory, based on recommendations of the WHO.
